Understanding integrated care: a complex process, a fundamental principle
Over the past year I have been involved in a range of research and development activities that seek to understand the successful adoption of integrated care. In essence, the common operating definition from protagonists is to support “the delivery of universal, local care that can be replicated locally, and little else”. This is the “what” of integrated care, no university accepted definition of integrated care, no universal model of care that can be replicated locally, and little else. This is the “what” of integrated care. Whilst the latter might be disputed it remains true that people resonate with what integrated care means and particularly how it can be applied.

and processes of integration (i.e., cultural and social as well as structural and systemic). However, relatively few have sought to explore how to understand this full complexity of integrated care in order to support through the lens of complex adaptive systems [2] or the idea that better care co-ordination to people is the result of better care undertaken at multiple levels (e.g., systemic, organisational, professional) [3].
Recent work to develop a Diagnostic Model for Integrated Care has helped describe the necessary steps in the implementation process; albeit within the context of health management programmes in the Netherlands [2]. Common to this and other conceptual models is the recognition that integrated care is a “complex intervention” where management and operational processes to support integrated care occur at many

QUE HACEMOS?

DESARROLLO E INVESTIGACION

Apoyamos programas de desarrollo de prácticas y de investigación a evaluar y traducir los resultados en lecciones y herramientas que soporten el avance de la atención integrada

EDUCACION Y ENTRENAMIENTO

Apoyamos y lideramos programas y eventos educativos como cursos en línea, cursos de verano, y de intercambio, bajo nuestro programa de “ACADEMIA DE ATENCION INTEGRADA”

QUE HACEMOS?

DIRECTORIO INTERNACIONAL

Estamos desarrollando un centro de conocimiento interactivo de acceso abierto que facilite el acercamiento de personas interesadas al campo de conocimiento y acción de la Atención Integrada.

NUESTRA RED

Conectamos organizaciones e individuos para que compartan experiencias, conocimientos e ideas en la investigación y la aplicación de atención integrada.

PERSPECTIVAS Y CAMINOS
EN ATENCION INTEGRADA

QUE ES ATENCION INTEGRADA?

QUE ES ATENCION INTEGRADA?

Fuente: <http://www.kingsfund.org.uk/topics/integrated-care>

QUES ES ATENCION INTEGRADA?

- No es algo nuevo
- No existe un concepto único
 - Es relativa a quien, donde y cuando se defina
 - Hay una variedad de términos y definiciones

Existe rasgos generales???

Son complementarias???

1. PERSPECTIVA DEL USUARIO (S)

“(Yo) planeo mi cuidado
con personas que **trabajan juntas**
para **entenderme** a mi y a mi cuidador,
dejándome en **control**,
y **juntando todos los servicios** que me ayudan
a alcanzar los **objetivos**
que me son importantes.”

2. PESPECTIVA DE PROCESOS Y ALINEACION HACIA RESULTADOS

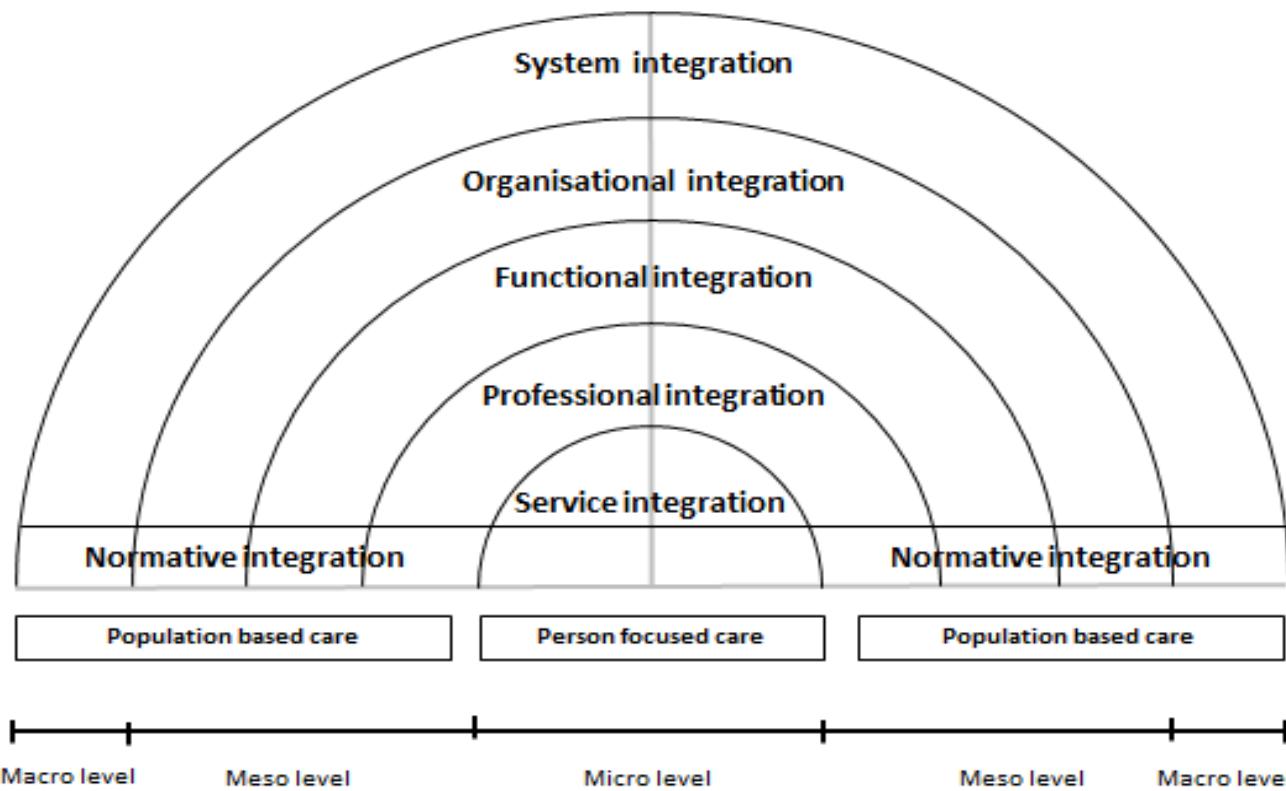

“Integración es un **set coherente de métodos y modelos** de financiamiento, administración, organización, entrega de servicios y niveles clínicos, diseñados para crear **conectividad, alineamiento** y **colaboración** dentro y entre el sector de **cuidados** y el sector **curativo**.

El **objetivo** de estos métodos y modelos es el de mejorar la calidad de la atención, la calidad de vida, los niveles de satisfacción de los consumidores y la eficiencia para los pacientes...cruzando a través de **múltiples servicios, proveedores y lugares**.

[Cuando] **el resultado** de todos estos esfuerzos de promover integración [llevan] al **beneficio de grupos de pacientes** [el resultado] puede ser llamando “Atención Integrada”

Traducido de Kodner and Spreeuwenberg, IJIC 2002

ATENCION INTEGRADA, MAPA CONCEPTUAL

Pim Valentijn, IJIC 2012

ATENCION INTEGRADA, MAPA CONCEPTUAL

Enfoque bio-psicho-social comienza por neesidades de usuario

3. PERSPECTIVA DE SERVICIOS

Atención Integrada “es la **gestión y prestación** de servicios de salud de forma tal que las personas reciban un continuo de servicios de promoción, prevención, diagnóstico, tratamiento, gestión de enfermedades, rehabilitación y cuidados paliativos, a través de los diferentes niveles y sitios de atención del **sistema de salud**, y de acuerdo a sus necesidades **a lo largo del curso de vida**”.

SERVICIOS INTEGRADOS/COORDINADOS DE SALUD

Adaptado de la OMS Region Europea

ATENCION INTEGRADA

RASGOS GENERALES/PRINCIPIOS

1. Centrado en la persona (s) y sus circunstancias, a lo largo de su vida
2. Paquete comprehensivo de servicios de salud
3. Uso de métodos y modelos para la alineación y coherencia
4. Responsabilidad compartida por resultados
5. En varios lugares/niveles

PERSPECTIVAS Y CAMINOS
EN ATENCION INTEGRADA

PORQUE Y PARA QUE ES NECESARIA?

PORQUE?

- Hay muchos avances en Medicina y desarrollo social que han tenido repercusiones positivas increíbles en salud
- Sin embargo hay muchos problemas de falta de acceso, de calidad, de eficiencia, de satisfacción de usuarios...
- Estos problemas están relacionados con la fragmentación y mal enfoque de la atención

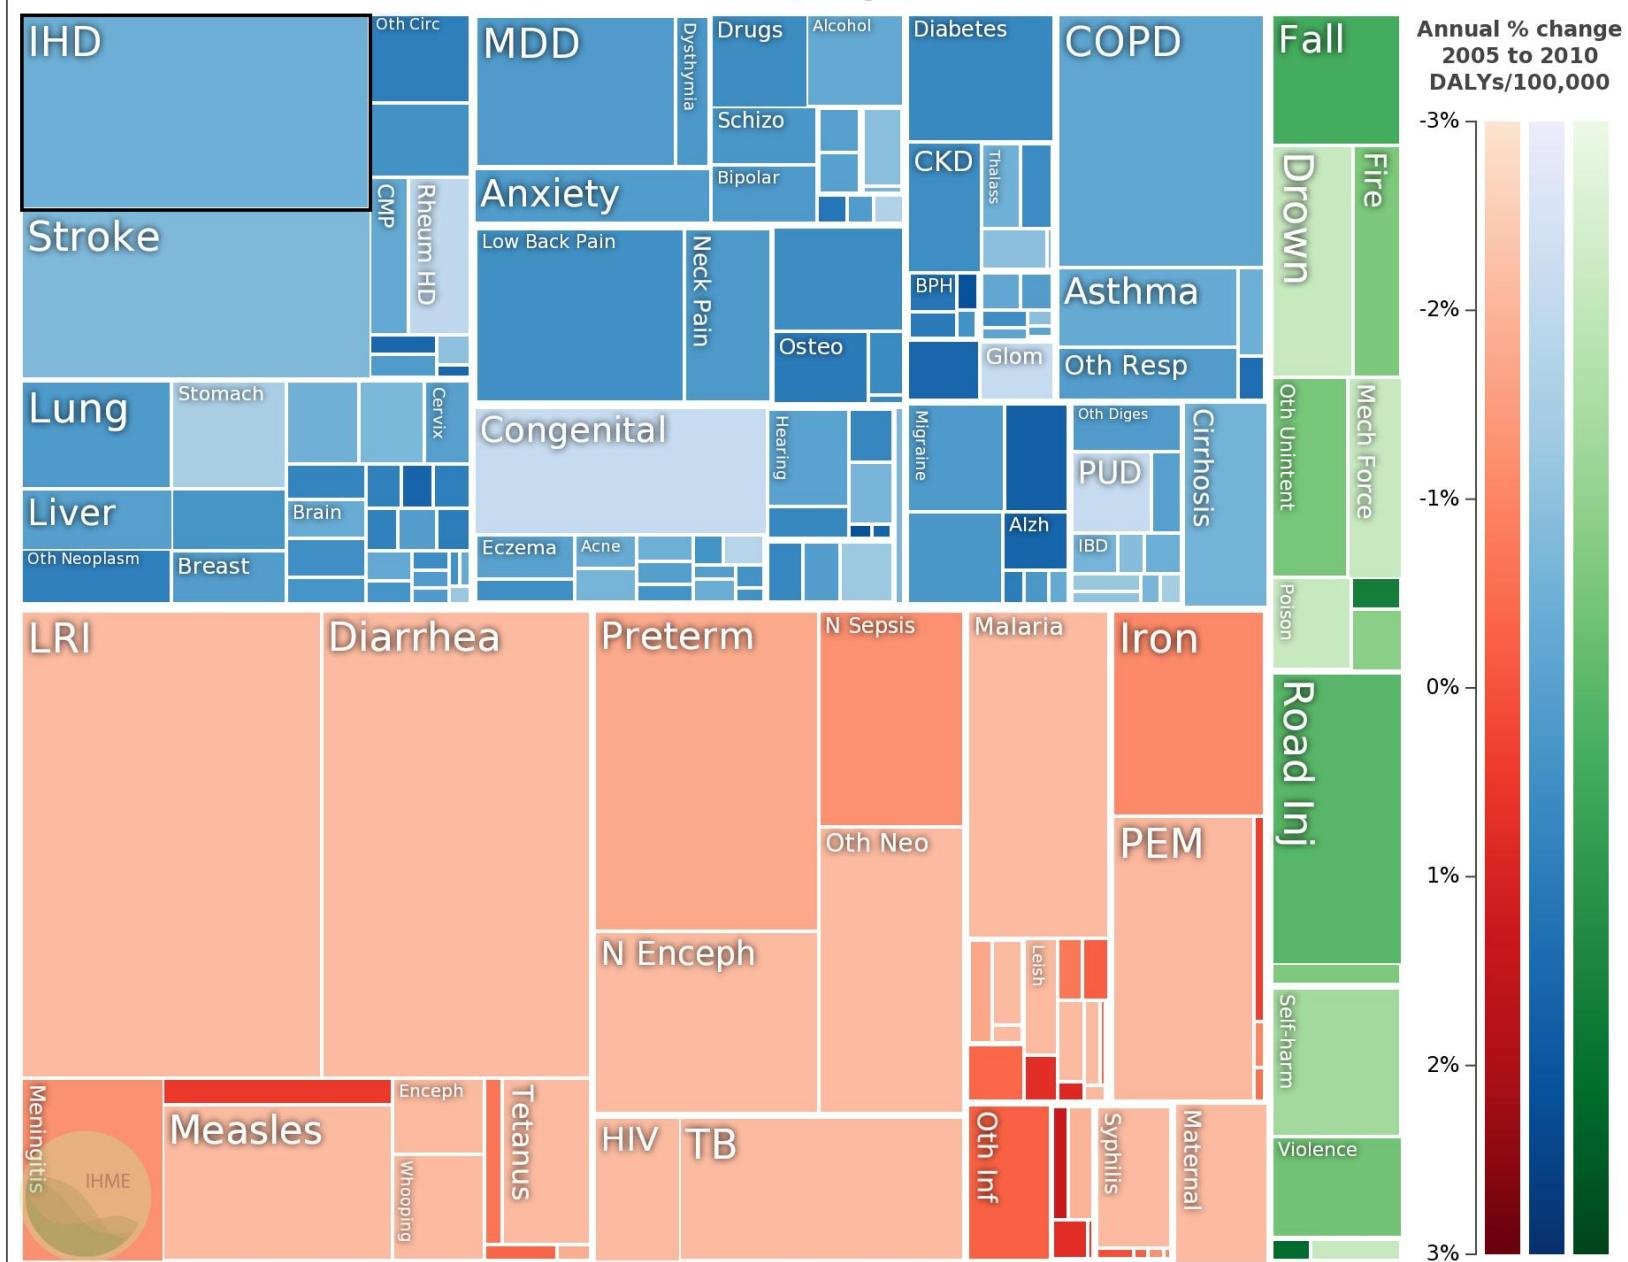

PORQUE?

ADEMÁS...

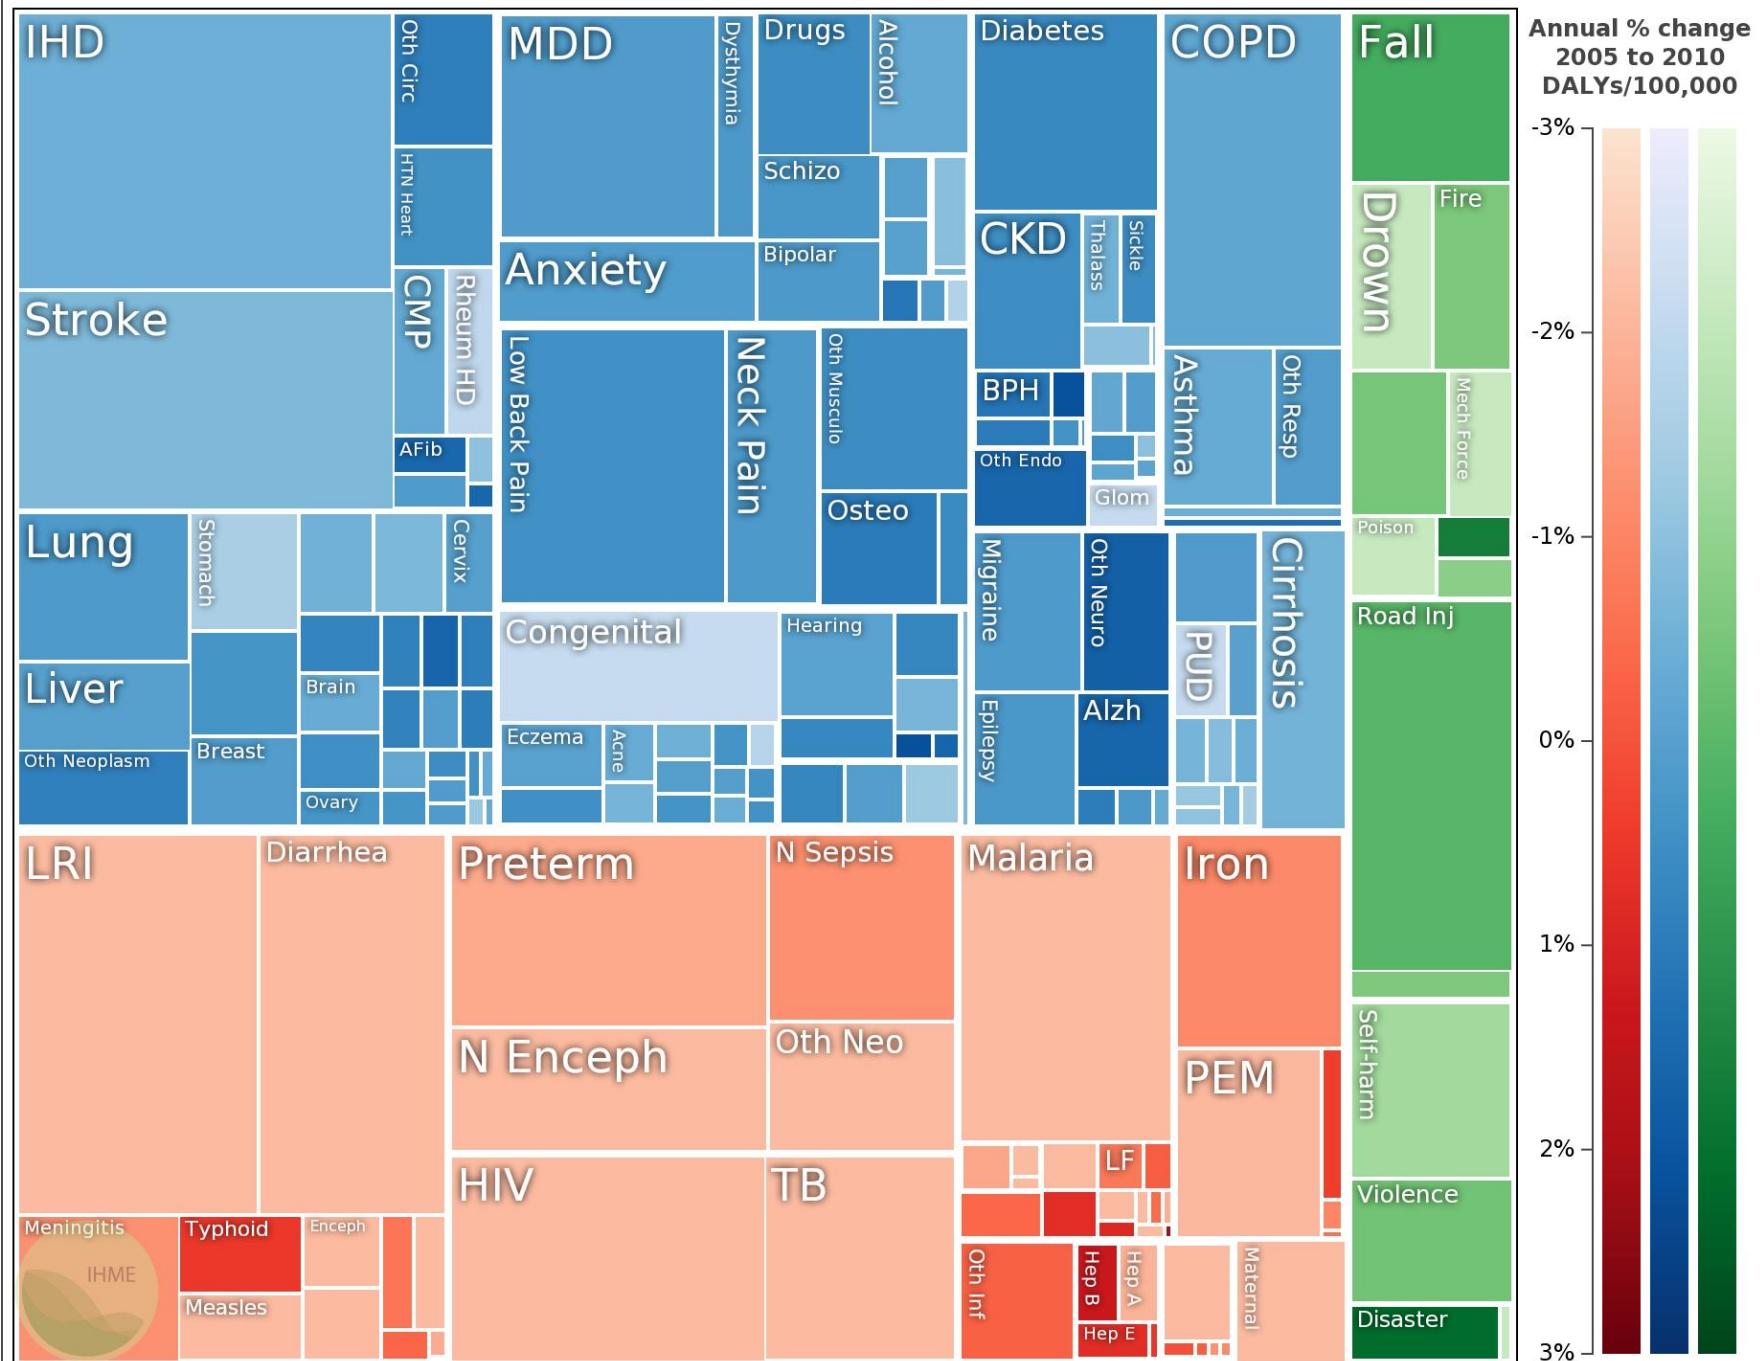

Existen nuevos desafíos y oportunidades

1. Transición demográfica y epidemiológica
2. Complejidad de las necesidades y de la atención
3. Inversión en salud en un clima de crisis financiera
4. Desarrollo tecnológico y de comunicaciones

MAS POBLACION Y DE MAS EDAD

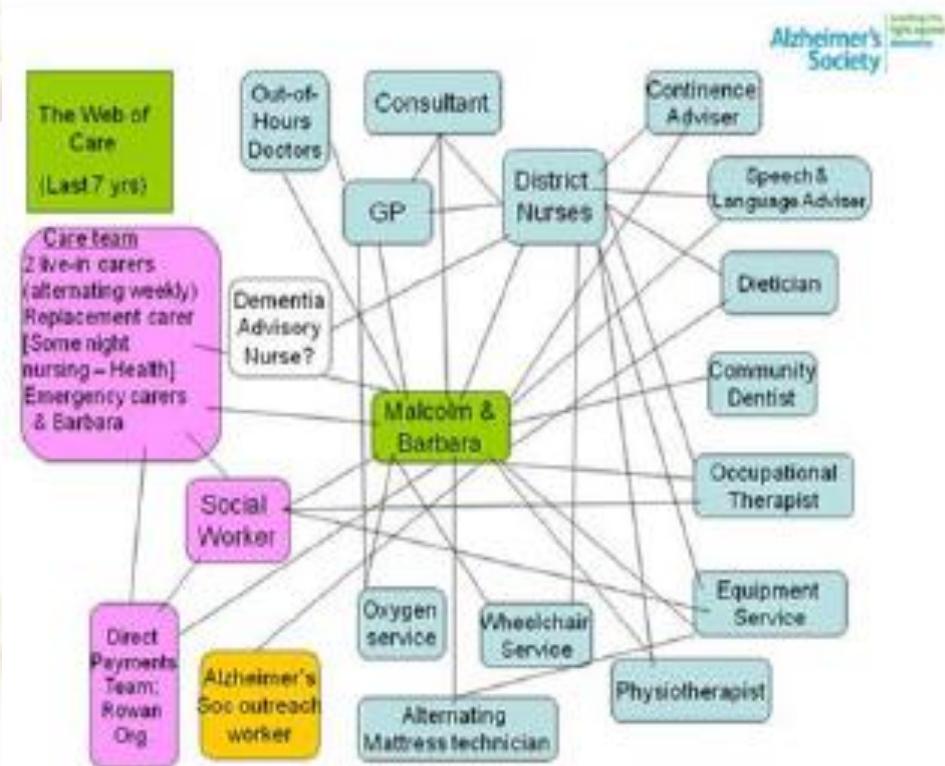

SISTEMAS DE SALUD Y SOCIALES NO PREPARADOS

La forma en la que los sistemas están diseñados lleva a:

- Falta de responsabilidad de los problemas del usuario
- Falta de involucramiento de usuarios y sus cuidadores en su autocuidado
- Pobre comunicación entre colegas de trabajo
- Duplicación simultanea de tareas y hoyos de atención;
- Manejo de una condición sin reconocer otras
- Pobres resultados para la persona, cuidador y el sistema

PARA QUE?

OBJETIVOS

La promesa de la atención integrada es que contribuye a alcanzar “**el triple objetivo**”:

1. Mejorar la experiencia de los usuarios
2. Mejorar la salud de las persona(s)
3. Mejorar costo-efectividad

- Torbay

Otras estrategias y enfoques

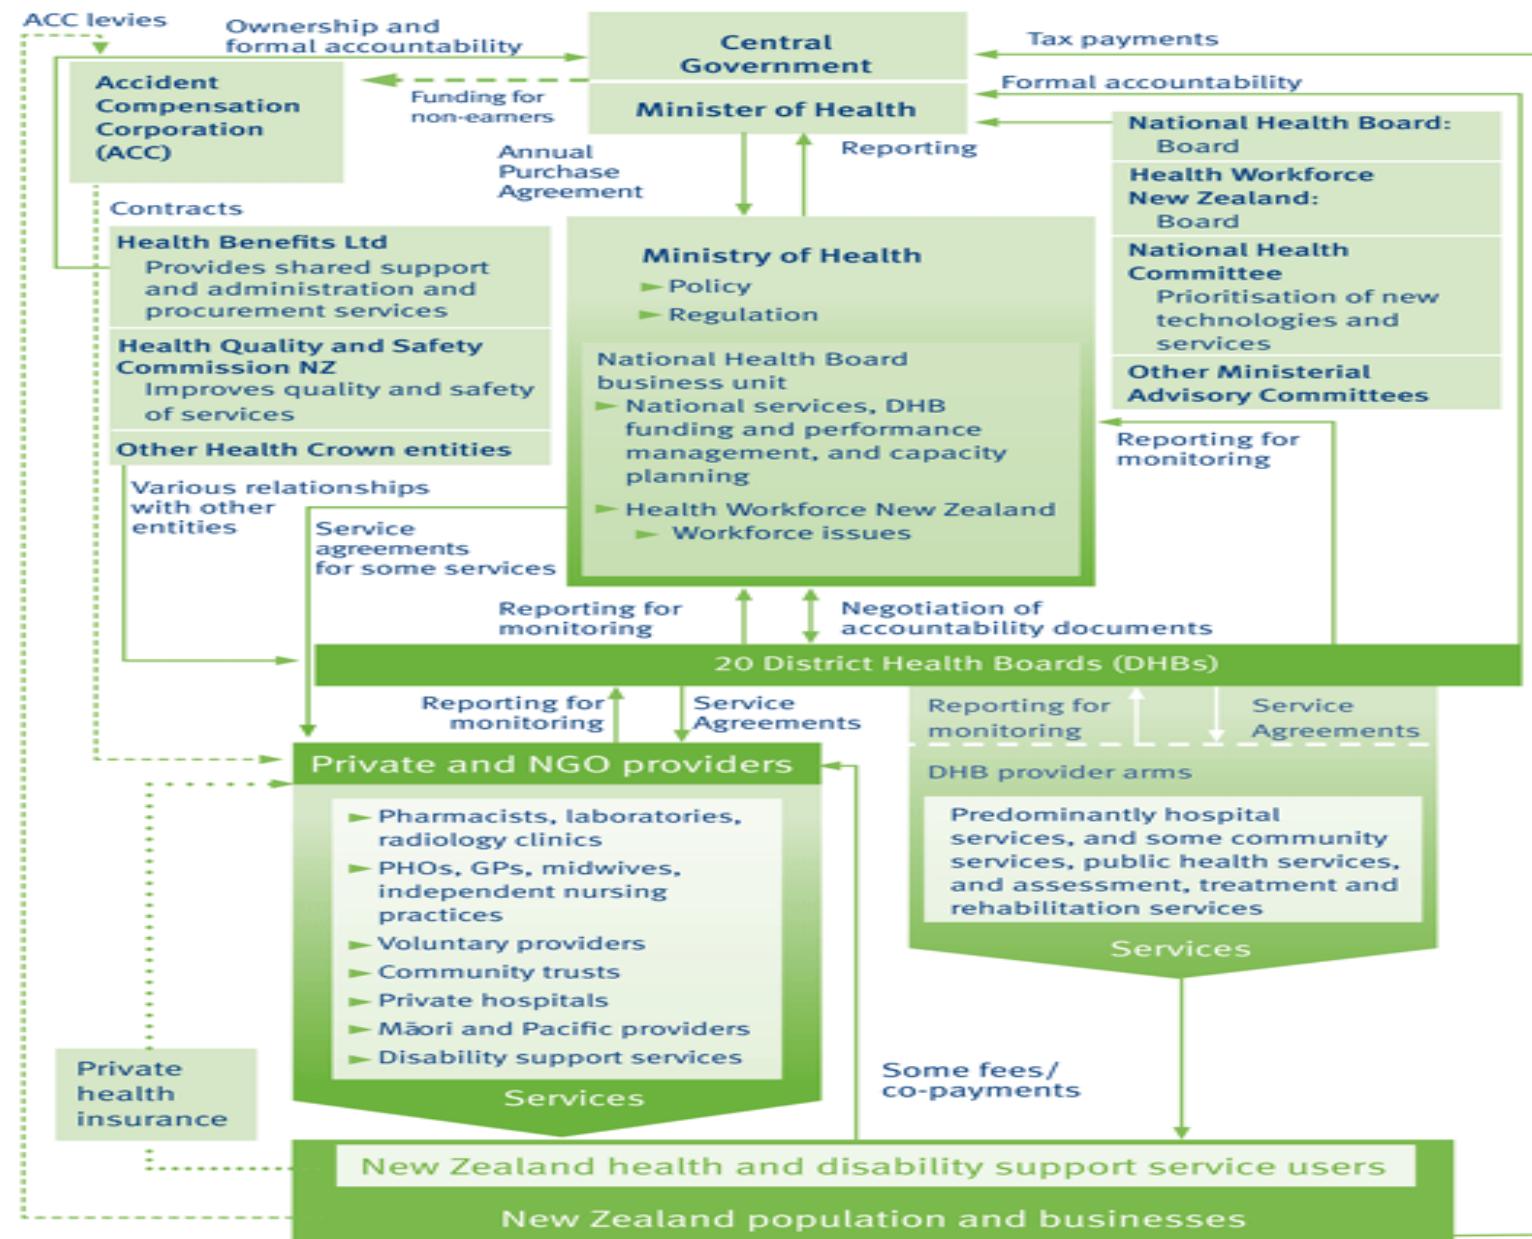

- EIP AHA
- OMS

LINEAS EN COMUN???

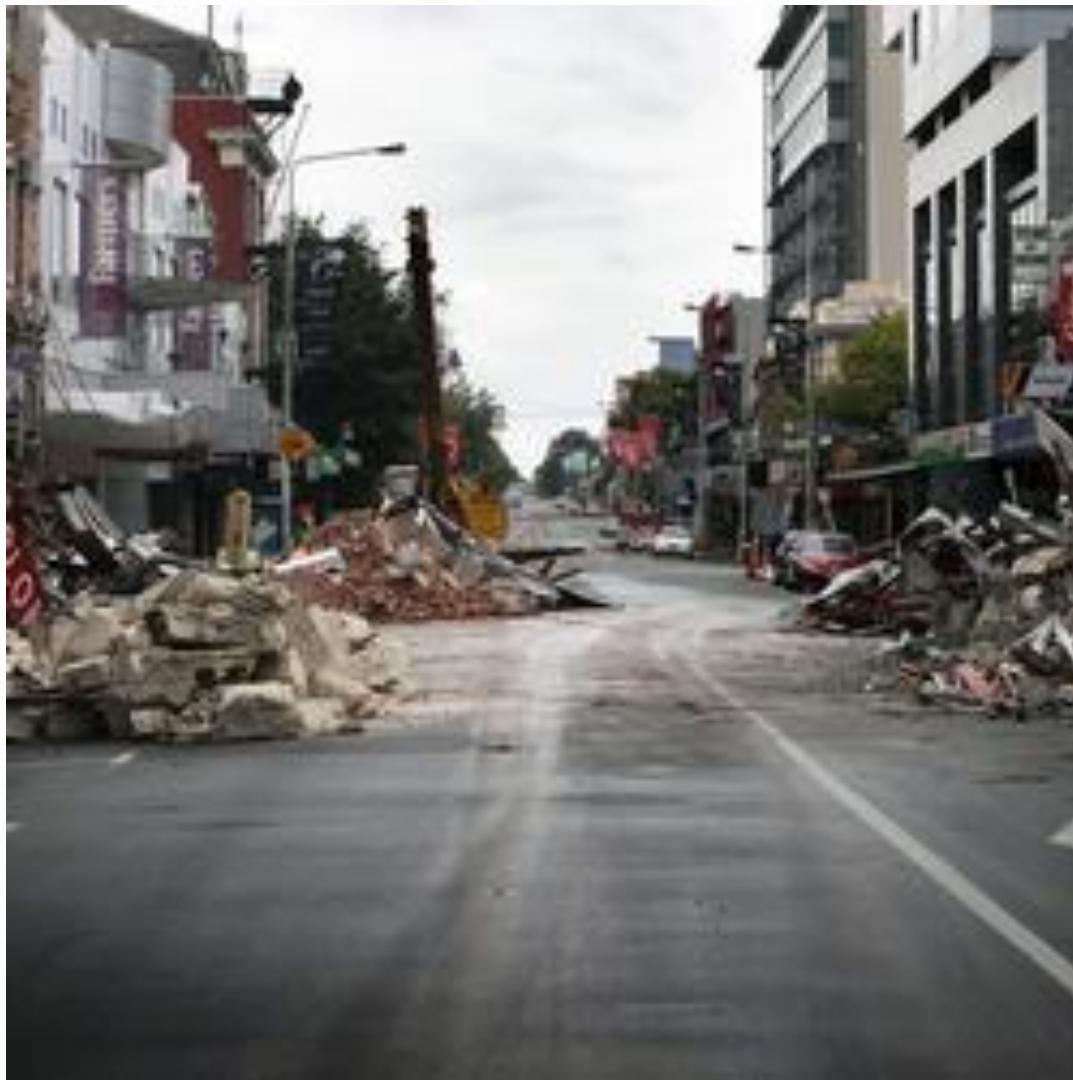

Canterbury, Nueva Zelandia

NEW ZEALAND

ORIGENES

- 1990's-early 2000's: separación proveedor/comprador
- 1992: PEGASUS
 - inversión de ganancias/ahorros en extensivos programa de educación continua a médicos
- Mediados 2000 interés de Mary Gordon y Nigel Miller en métodos de producción “lean” y lanzamiento del programa “*mejorando la travesia del paciente*”

ORIGENES

- 2006: 5000 pacientes referidos por el primer nivel borrados de la lista de espera para consulta hospitalares
- 2006, Gordon Davies continuo este interés con el apoyo de la unidad de desarrollo de negocios (Richard Hamilton)

VISION 2020

Si nada cambia, Canterbury necesitaría:

- Un hospital que duplique la capacidad actual
- 20 % mas doctores y enfermeras
- 2 000 mas camas en casas de cuidado al adulto mayor (aumento del 40 %)

Esto no era **SOSTENIBLE** ni alcanzable!

COMO LO LOGRARON?

1. Creación de una Visión

- Xceler 8 + visión 2020: creación de objetivos y principios
- “un sistema, un presupuesto”

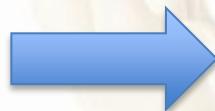

2. Inversión sostenida en proveer al equipo con competencias para la innovación y apoyándolos cuando lo hacían

- Xceler8, Particip8, Collabor8
- Apoyo para el rediseño de procesos

COMO LO LOGRARON

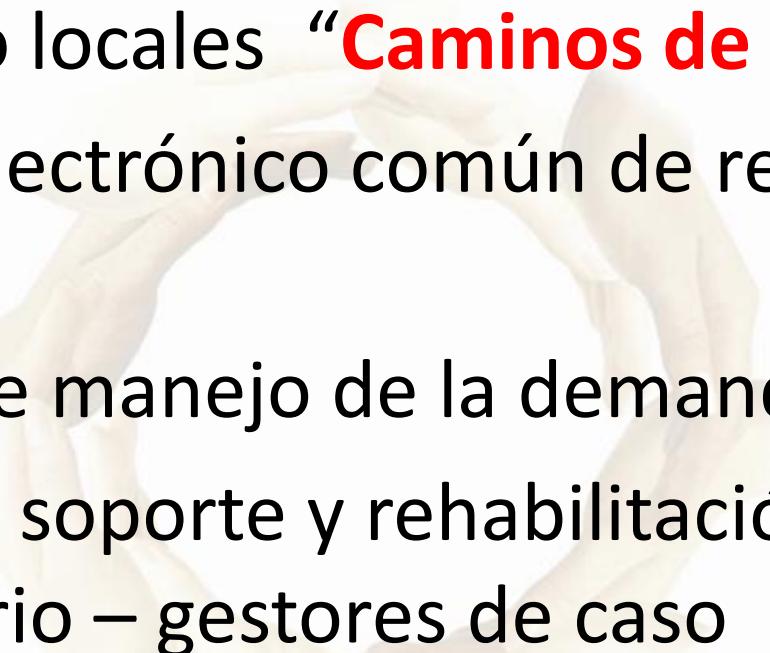

3. Contratos e incentivos

- Reemplazo de pago por servicio por pago per cápita
- Contratación de alianzas

CONFIANZA

QUE HICIERON?

- 
1. Desarrollo locales “**Caminos de Salud**”
 2. Sistema electrónico común de referencia y retorno
 3. Sistema de manejo de la demanda aguda
 4. Equipo de soporte y rehabilitación comunitario – gestores de caso

QUE HICIERON

- Prevención de caídas
- Revisión en las casas por farmacólogos de las terapias a pacientes con multimorbilidad
- Cambios a nivel de hospital
 - Revisión del flujo de procesos de radiología
 - Unidad de evaluación al paciente agudo
 - Predicción de demanda

LOGROS

Reducción:

- Tasa de admisiones de emergencia al hospital
- Promedio de días de hospitalización
- Tasa de re-admisiones luego de alta hospitalaria
- Uso de salas de urgencias
- uso de casas de cuidado

Aumento:

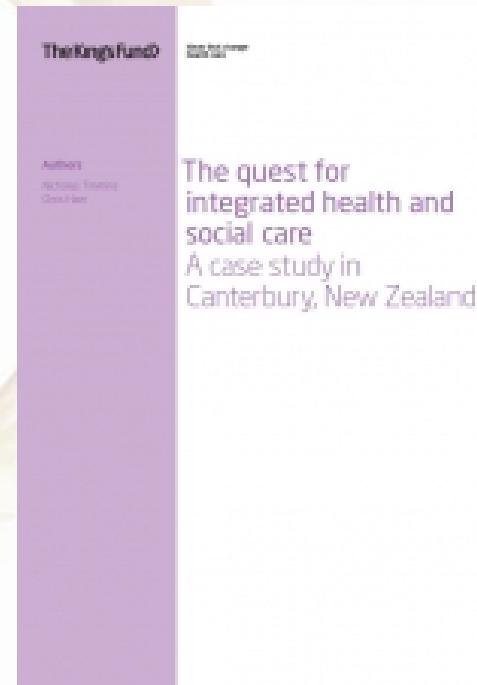

- actividades de APS
- cirugía electiva

No hubo cambio:

numero de camas hospitalarias

HOW THE VA HEALED ITSELF

Veterans' hospitals used to be a byword for second-rate care or worse. Now they're national leaders in efficiency and quality. What cured them? A large dose of technology. **BY DAVID STIERS**

An avuncular man with a gravelly voice, Dr. Michael Sandickoff, 65, frowns up his computer. With a keystroke, he's on a page that lists a patient's complete health record, including office visits, drug prescriptions, and lab tests. "Absolutely everything is available," says the chief of staff at the Manhattan campus of the VA New York Harbor Health Care System. Up goes a computer rolling him the patient — a 90-year-old diabetic who claims there are 100 reasons why he can't come to the hospital more often than once a month. "It's a week when we've spent three hours with the patient," he says. "He can't even stand on his feet. He's been on bedrest for months." And the doctor has a solution: a computerized prescription that will get the patient moving again.

The day, October 2, 2003, is a landmark moment in using the latest computer network, as well as the latest medical technology, to help patients with high blood pressure. With a handheld device, the doctor has called the computer to have the patient's heart rate and blood pressure read on the fly. "It's like a blood pressure cuff on your arm," says Sandickoff. "It's another reason why we're getting the right drug to the right patient."

In the New York City area, the health care system has invested \$1 billion in a high-speed computer network, and it's set to improve even further. Information like the VA has figured in the past, "driving the system to nowhere." The patient, who is suffering from hypertension, has a prescription for lisinopril, a drug that's helping him.

PATIENTS ON WIRE
A VA hospital in Manhattan houses 500,000 veterans and their dependents. Here's how the health care system uses technology to serve them better, and more efficiently.

1. VA Hospital
When the computerized prescription is issued, the pharmacist who reads it receives an alert and the Sandickoff office.

2. Veterans Health Administration
The federal agency that runs the nation's 171 VA health facilities in the United States. By linking them to a central computer system, the agency is able to access, among other information, the records of the 1.6 million veterans who receive care through the VA. As a result, the agency can quickly identify patients who need to be hospitalized.

3. VA Hospital
For example, if a patient comes in with a high blood pressure reading, the Sandickoff office can immediately check the patient's history to see if he's taking lisinopril. If he is, the doctor can prescribe a different drug, such as hydrochlorothiazide, which is also administered at the VA. The physician can then prescribe the new drug, and the Sandickoff office can immediately inform the pharmacist.

El test de la señora Smith

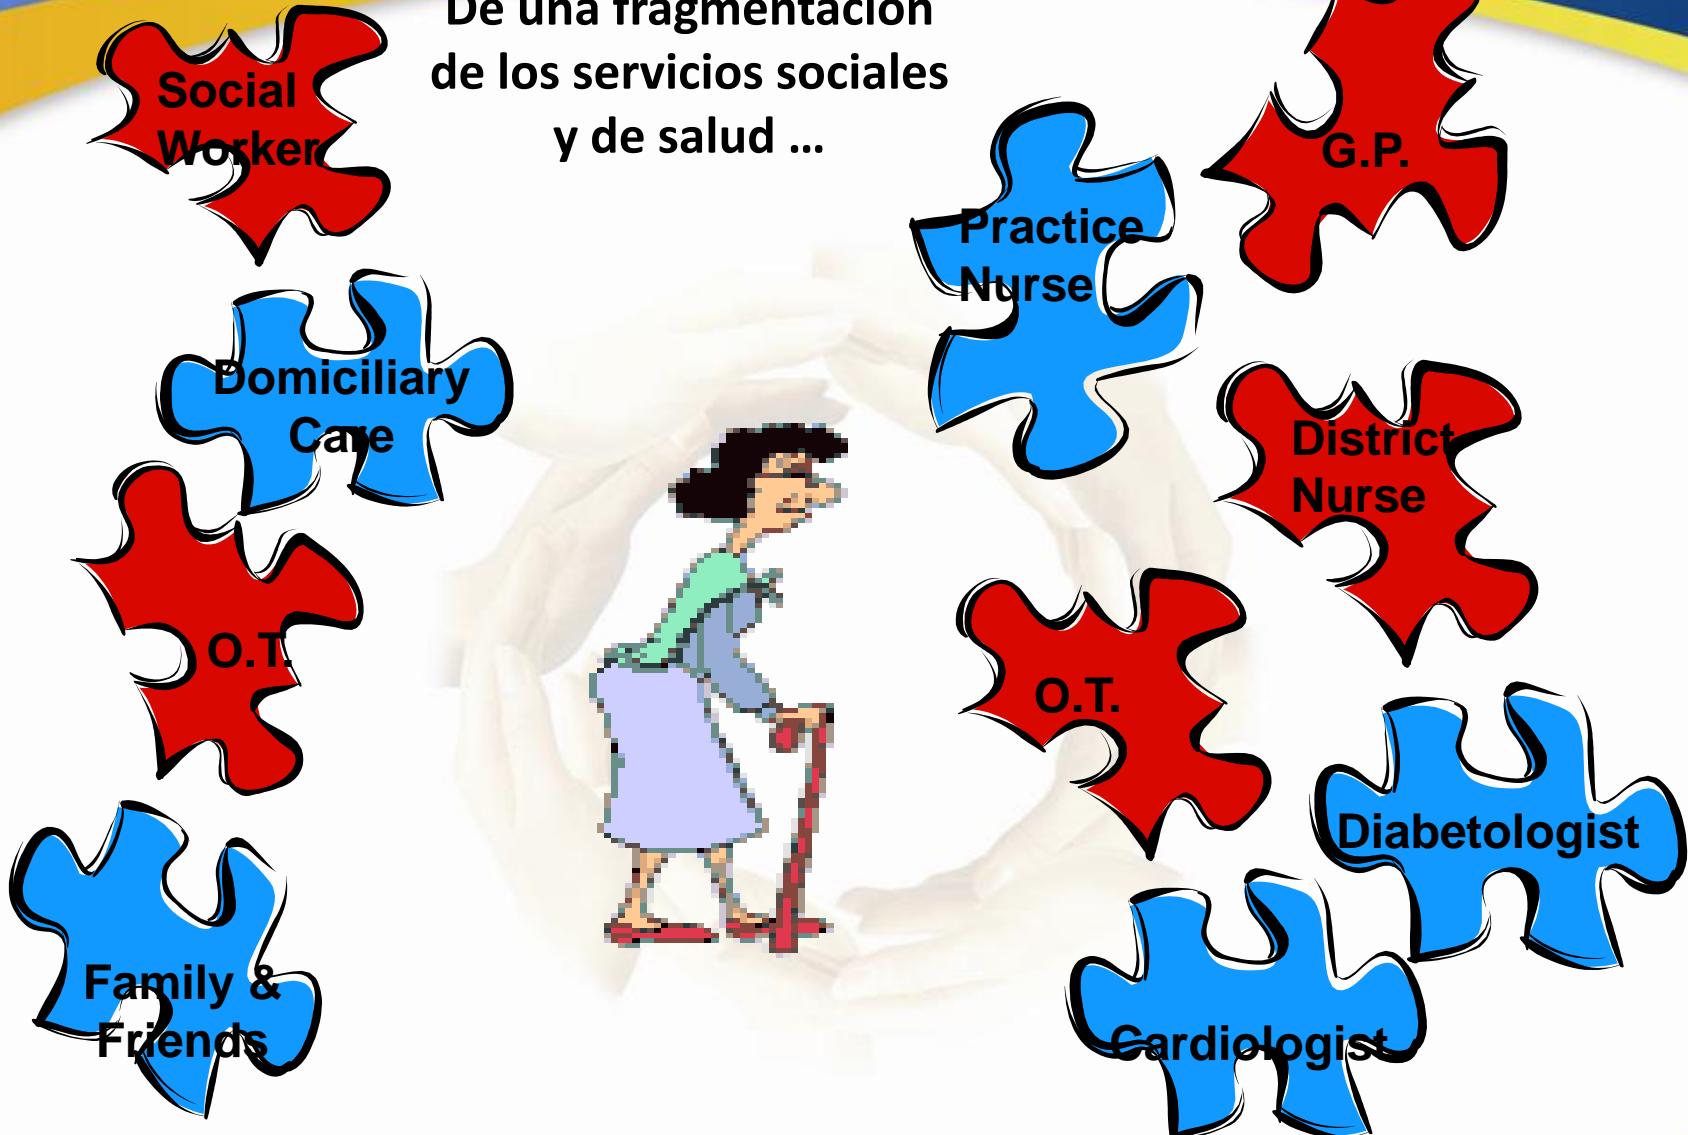

Muchas personas con condiciones mentales, físicas y medicas están en riesgo de pasar mucho tiempo en el hospital o en casas de cuidado.

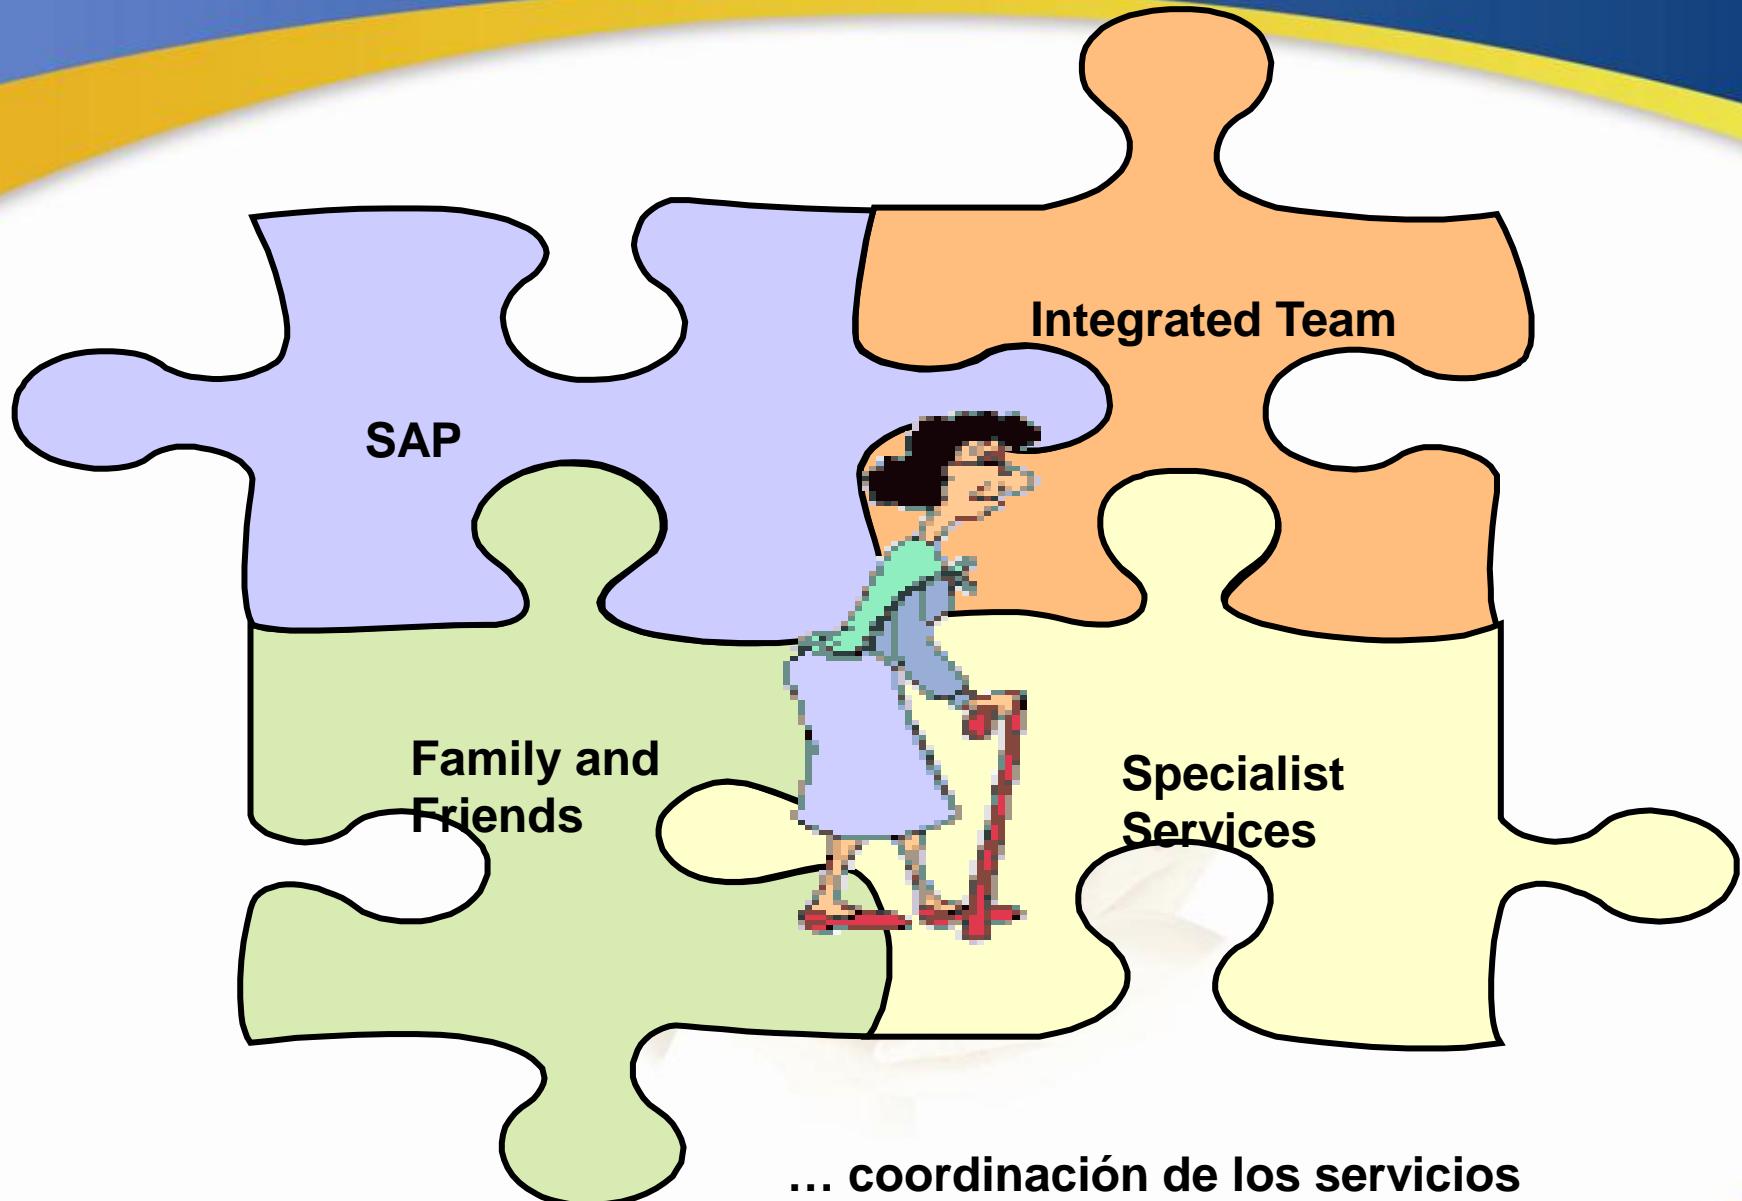

La señora Smith es una señora ficticia de 80 años con una variedad de problemas sociales y de salud que requerían atención.

La señora Smith encontraba dificultades y frustraciones a diario cuando navegaba por los sistemas de protección social y de salud.

Estos problemas incluían muchas evaluaciones separadas, repetir su historia a muchas personas, retraso de la atención por falta de información, y total asombro frente a la complejidad del sistema .

Integrating health and social care in Torbay Improving care for Mrs Smith

Key message

- a. "The paper outlines several health and social care integration projects, lessons and how the lessons learned can inform other organisations. It also looks at some practical steps towards improving integration and change. Evidence from the small study in Torbay was used to provide insights into the challenges of implementation, evaluation and next steps."
- b. "The paper discusses integrated health and social care and the practical changes required to allow the two agencies to work more closely together. It also considers how services should be organised to provide care in different settings to meet and to help where the needs of individuals fluctuate. The improvements of hospital-based social care facilities are highlighted and discussed in relation to the development of alternative methods of responding to care."
- c. "The results of a programme evaluation of hospital and local team of community-based interventions for those aged over 65, undertaken by the University of Bristol. The evaluation involved 11 local authorities across the country who were learning partnerships in health services and social care. These partners are now spreading their programme to local areas throughout the United Kingdom. (See Quality Improvement).
- d. "Healthcare commissioners will need to credit integrated care and the role of local health and care providers in making these crucial improvements over time and to demonstrate this in the longer term. To take advantage of the improvements of organisational stability and outcomes of leadership, the point of delivery partners and commissioners like to look at an agreed whole system for improvement to ensure the coverage and use where improvements difficult to implement."

ROADMAP

Strengthening people-centred health systems
in the WHO European Region: A Framework for Action
towards Coordinated/Integrated Health Services Delivery
(CIHSD)

The purpose of this document is to provide an overview of the core phases and relevant processes in developing a framework for coordinated/integrated health services delivery (CIHSD). The Roadmap at hand is intended as a planning tool to guide this process, generating discussions and facilitating opportunities for pragmatic collaborations and consultations throughout the phases and processes involved. In giving structure to the technical work on CIHSD at the WHO Regional Office for Europe, the Roadmap aims to ensure continued coherence of ongoing and future products and to maximize the relevance of this work for Member States.

The proposed Framework for Action towards CIHSD draws on the Regional Director's (RD) vision and that of Health 2020 for strengthening health system performance through innovative approaches to modernize and transform the delivery of services in order to better respond to the health challenges of the 21st century. These challenges include the increasing burden of non-communicable diseases, chronic diseases and multi-co-morbidities, the persisting and/or re-emerging burden of communicable diseases – demand people-centred care according to an appropriate continuum of services. Strengthening the continuum of care is key to addressing these challenges. The proposed Framework for Action towards CIHSD is designed to these needs while overcoming the enduring shortcomings of existing models of care. It is in this context and in response to the calls of Member States for contextualized, evidence-based policy-options to catalyze system-wide changes, that the development of the Framework for Action towards CIHSD has been shaped.

This Roadmap document is divided into five sections, giving a narrative to the following: (1) a brief overview of the coordination/integration of health services delivery looking to key definitions, concepts, and evidence available in the literature; (2) the context of the European Region to which this work plan needs to be applied; (3) the proposed framework for action towards CIHSD – its objectives, technical framework and expected outcomes and impact; (4) the specific phases and processes for its development; and (5) a description of key partnerships necessary to ensure this process is participatory and guided by continuous consultations with Member States, across in-house divisions and with external experts.

Why Integrated care matters

The King's Fund has been instrumental in making the case for integrated care (Ham and Curry 2011; Ham *et al* 2011; Goodwin *et al* 2012). Our argument is that the current fragmented services fail to meet the needs of the population and that greater integration can improve the patient experience and the outcomes and efficiency of care. This case was accepted by the NHS Future Forum, and the government in its response made commitments to promote integration. The challenge now is to convert policy intentions into meaningful and widespread change on the ground.

1. Encontrar una causa común
2. Desarrollar una narrativa compartida
3. Crear una visión persuasiva
4. Establecer liderazgo compartido
5. Entender nuevas formas de trabajar
6. Seleccionar
7. De abajo-arriba y de arriba-abajo
8. Juntar recursos
9. Innovación y financiamiento y contratación
10. Reconocer que no hay modelo único
11. Empoderar usuarios
12. Uso de tecnología de información y comunicación compartida
13. Desarrollo recursos humanos con competencias mixtas
14. Objetivos medidos específicos
15. Ser realista, especialmente en costos
16. Estrategia coherente de cambio
